

EBSCO's Commitment to Accessibility: Improving User Experience for All Users

EBSCO invests time and resources to provide all users with access to our products. EBSCO works with internationally recognized accessibility experts who review products and help find customized solutions to lower accessibility barriers. We also work with customers and conduct EBSCO user research to support accessibility. Every feature released by EBSCO is tested with the accessibility code validator, WAVE and manually tested with assistive technology products. EBSCO is committed to improving accessibility in every product release.

Supporting Our Users

- Text-To-Speech functionality on HTML full-text articles to better assist users w/ visual or learning disabilities
- Provide descriptive page titles and alternate text for meaningful images
- Leverage ARIA landmarks to help users with screenreaders navigate our user interfaces
- Commitment to develop responsive user interfaces for all products
- Minimal use of tables to ensure users can easily navigate our products using a screen reader and/or keyboard
- Decrease page size for short download times for all users
